

Weekly Delivery Plan

For the week of	06th July 2026
Meeting conducted with the Lab in-charge (Yes/No)	Yes 
Date of the meeting:	04/07/2026
Reason, if not conducted the meeting	NA
No of topics planned by Grade	Grade 3: 1 topic (Science) Grade 4: 1 topic (Science) Grade 5: 1 topic (Science) Grade 6: 1 topic (Science) Grade 7: 1 topic (Science)

Class III – Reading Maps

Module - SubModule	Conceptual - Science
Topic Description	A map is a drawing that shows places and features of an area from above. In this activity, students learn how to read a map, understand the key aspects to check on a map, and find their way from their current location to a destination. They also develop a clear understanding of directions. This activity helps build their spatial awareness and practical navigation skills.
Learning Outcomes	1. Understand how to read and interpret a map. 2. Identify key aspects of a map, such as symbols, landmarks, and directions. 3. Determine the route from their current location to a desired destination.
Tools Involved	This activity is TLM (sheet) based. It also includes a bunch of location tags.
Location of the required material	The TLM is available in the cabinet with the name Reading Maps.
Safety Instructions	1. Instruct the students to handle the sheet carefully and not to write anything on them. 2. Instruct the students to not lose the locations tags and keep them safe after the activity.
Engagement Questions	1. Why do we need a map key (legend)? 2. What does the compass show?
Other Activity Instructions if any	Before the class starts, arrange all the components to ensure the activity runs smoothly.
Plan B	Conduct a quiz on the topics covered so far.

Class IV - Solids, Liquid and Gas

Module - SubModule	Conceptual - Science
Topic Description	Kids learn about the three states of matter by arranging beads on the TLM to represent how molecules are packed in solids, liquids, and gases. By placing these beads in the given slots, they visually understand how particle arrangement changes from tightly packed to loosely spaced. They also replicate the same using a paper, thermacol balls, and gum.
Learning Outcomes	1. Students will understand the three states of matter — solids, liquids, and gases, and learn how their shapes, volumes, and particle arrangements differ. 2. Recognizing states of matter in food, drinks, and nature.
Tools Involved	TLM, Plastic Glasses, Fevistick, Paper, Thermocol ball
Location of the required material	1. Plastic Glasses, Fevistick, Paper, Thermocol ball: WorkStation 2. TLM: In cabinets
Safety Instructions	1. Handle beads and thermocol balls carefully — do not drop or lose them. 2. Return all materials safely after the experiment.
Engagement Questions	1. How is a solid different from a liquid or a gas? 2. Can you name examples of each state of matter around you? 3. What happens when ice melts or water boils?
Other Activity Instructions if any	NA
Plan B:	Public speaking or revision from previous topics

Class V - Food Chain

Module - SubModule	Conceptual - Science
Topic Description	A food chain shows the path of energy from one living organism to another. Plants, animals, and other organisms are connected because each depends on another for food and survival.
Learning Outcomes	1. Identify the components of a food chain. 2. Arrange organisms in the correct feeding sequence.
Tools Involved	TLM
Location of the required material	NIL
Safety Instructions	1. Handle the picture cards carefully. 2. Keep all TLM materials organized after use.
Engagement Questions	1. What would happen if plants disappeared from a food chain? 2. Which animal in a food chain gets energy directly from plants?
Other Activity Instructions if any	Make sure the students have completed the worksheet and Observation Q/A
Plan B:	Public speaking or revision from previous topics

Class VI - Properties of Magnets

Module - SubModule	Conceptual - Science
Topic Description	Magnets have unique properties such as attraction, repulsion, and directional behavior. Students will explore how magnets interact with iron filings and other magnetic materials.
Learning Outcomes	1. Identify the basic properties of magnets. 2. Observe magnetic attraction and magnetic field patterns.
Tools Involved	TLM, Consumables
Location of the required material	Iron Filings, Small disposable cup, thread, scissors: Workstation cabinet
Safety Instructions	1. Handle iron filings carefully and keep them away from the eyes. 2. Don't drop the magnets on the ground.
Engagement Questions	1. Why do iron filings gather around certain parts of a magnet? 2. What happens when two similar poles of a magnet are brought together?
Other Activity Instructions if any	Make sure the students have completed the worksheet and Observation Q/A
Plan B:	Public speaking or revision from previous topics

Class VII - FIRE EXTINGUISHER

Module - SubModule	Conceptual - Science
Topic Description	A fire extinguisher is a safety device used to control or extinguish small fires. In this activity, students will observe how carbon dioxide gas produced by the reaction between baking soda and vinegar can put out a flame by cutting off its oxygen supply.
Learning Outcomes	1. Understand the basic working principle of a carbon dioxide fire extinguisher. 2. Observe how carbon dioxide helps extinguish a fire.
Tools Involved	Consumables
Location of the required material	Baking Soda, Vinegar, Skewer, Candle, Lighter: Teacher's Table, Plastic Bottle, Disposable Plastic Glass, Balloon: Workstation cabinet.
Safety Instructions	1. Be careful while lighting and extinguishing fire. 2. Keep the lighter away from students and extinguish the flame immediately after the activity.
Engagement Questions	1. Why does a fire need oxygen to keep burning? 2. How does carbon dioxide help extinguish a fire?
Other Activity Instructions if any	Make sure the students have completed the worksheet and Observation Q/A
Plan B:	Public speaking or revision from previous topics
